AUTOMATION DEVELOPER

1. Navigate through booking.com to extract information
   a. Search accommodation by:
      - Location: barcelona
      - Range of dates
      - 2 adults + 2 children
   b. Sort by: Star rating and price
   c. Filter results by:
      - Total nights
      - Price range (min and max)
      - Property type: hotels
      - Review score: +8
      - Room facilities: air conditioning
      - District: Barcelona City Center
   d. Print results:
      - Number of total properties found
      - Top 5 highest score:
        1. Name
        2. Price
        3. Number of reviews
        4. Score
        5. Location
        6. Image URL
2. Download pdf files from https://file-examples.com
   a. Navigate to correct page
   b. Download 3 pdf samples with following filename:
      - <timestamp>_<uuid_number>_<file_size>.pdf
3. Avoid getting blocked by https://www.wmphvacations.com and take a screenshot of two different pages of the website.
4. How do you modify the webdriver flag to prevent detection?
5. Can automation testing fully replace manual testing?

Requirements:
- docker
- selenium/puppeteer

PS: Any extra implementation in the tests is a plus.
